## O\*Net Factor Analysis Project

### Methods

#### Participants

#### Material

#### Procedure

### Results

Maybe try hierarchical which 2 overarching factors with the “dimensions” under each).

We are working on a factor analysis of the characteristics themselves. This is based on the larger number of items (97?) with an n of now 568.

We tried different numbers of factors based on a scree plot suggesting we start at 8 factors. We printed only those loadings at .3 or higher to begin. Very few items loaded on more than 1 factor, and most loaded at .3+ on one factor. A few were negative. Need to think carefully about interpretation by exploring what the items themselves are.

Next - tried a 2 factor solution, wondering if items in the “context” and “activity” categories loaded as expected based on Onet categories. Again, most items loaded at .3+. The physical items generally loaded on factor 1.

30

31 ## Parallel analysis suggests that the number of factors = 12 and the number of compon

32 ##

33 ## Factor analysis with Call: fa(r = data[c(19:60, 62:117)], nfactors = 8, n.obs = 568,

34 ## scores = TRUE, alpha = 0.1)

35 ##

36 ## Test of the hypothesis that 8 factors are sufficient.

37 ## The degrees of freedom for the model is 3997 and the objective function was 14.37

38 ## The number of observations was 568 with Chi Square = 7590.09 with prob < 2.4e-22

39 ##

40 ## The root mean square of the residuals (RMSA) is 0.03

41 ## The df corrected root mean square of the residuals is 0.04

42 ##

```

43 ## Tucker Lewis Index of factoring reliability = 0.796
44 ## RMSEA index = 0.04 and the 10 % confidence intervals are 0.038 0.041
45 ## BIC = -17759.37
